Sample Eco 202 Assessment Test Questions and Answers

Below are examples of typical questions with brief explanations of the answers to illustrate how to approach them.

Question 1:

What is the law of demand?

Answer:

The law of demand states that, all else being equal, there is an inverse relationship between the price of a good and the quantity demanded. As price decreases, demand tends to increase, and vice versa.

Question 2:

Calculate the price elasticity of demand if the price drops from \$10 to \$8, and quantity demanded increases from 50 units to 70 units.

Answer:

Elasticity = (% change in quantity demanded) / (% change in price)

- % change in quantity demanded = $[(70 - 50) / 50] 100 = 40\%$
- % change in price = $[(8 - 10) / 10] 100 = -20\%$
- Elasticity = $40\% / -20\% = -2$

Since the absolute value is 2, demand is elastic.

For example, personality assessments aim to understand behavioral tendencies rather than produce right or wrong responses.

Similarly, situational judgment tests are subjective by nature; they seek to evaluate how a candidate approaches real-world scenarios rather than whether their responses are "correct." Cognitive ability tests do have correct answers, but these are determined by logical and factual accuracy rather than memorization.

Therefore, the idea of obtaining or searching for "Kenexa assessment test answers" is often misplaced. Success hinges on understanding the test's purpose and preparing appropriately rather than seeking specific answer keys.

- Risk of Disqualification: If an employer detects dishonest behavior, it can result in rejection or termination.
- Undermining Fairness: Cheating diminishes the integrity of the hiring process and can unfairly advantage dishonest candidates.
