Overview of Marine Mammals

Marine mammals are a diverse group of mammals that have adapted to live in marine environments. They are characterized by their warm-blooded nature, presence of hair (albeit minimal in some species), and the ability to give birth to live young, which they nurse with milk. These species include whales, dolphins, porpoises, seals, sea lions, and walruses. They are distributed across the world's oceans, from polar ice caps to tropical coral reefs.

Key Characteristics of Marine Mammals

- Warm-blooded: Maintain body temperature independent of the environment.
- Breathing Air: Use lungs and surface regularly to breathe.
- Fur or Hair: Present in some species for insulation.
- Live Birth and Nursing: Give birth to live young, feeding them with milk.
- Specialized Adaptations: Such as echolocation in dolphins or blubber for insulation.

Focus on Marine Mammals Starting with O

The letter "O" in the guide refers to specific marine mammals whose names start with that letter. While fewer species may begin with "O" compared to other letters, some notable examples include the Orca (Killer Whale) and the Pacific Ocean Dolphins.
