Sample Exercise Solution Breakdown

Example: Kinematics ? Motion in a Straight Line

Suppose a problem asks: A car accelerates uniformly from 20 m/s to 30 m/s over a distance of 500 meters. Find the acceleration and the time taken.

Step 1: List known values:

- Initial velocity, $u = 20 \text{ m/s}$
- Final velocity, $v = 30 \text{ m/s}$
- Distance, $s = 500 \text{ m}$

Step 2: Use the equation: $(v^2 = u^2 + 2as)$

Step 3: Substitute known values:

$$(30^2 = 20^2 + 2a \times 500)$$

$$(\rightarrow 900 = 400 + 1000a)$$

Step 4: Solve for a:

$$(1000a = 900 - 400 = 500)$$

$$(\rightarrow a = 0.5, \text{ m/s}^2)$$

Step 5: Find the time using $(v = u + at)$:

$$(30 = 20 + 0.5 \times t)$$

$$(\rightarrow t = \frac{10}{0.5} = 20, \text{ seconds})$$

Final Answer:

- Acceleration, $a = 0.5 \text{ m/s}^2$
- Time taken, $t = 20 \text{ seconds}$

CBSE 9TH SCIENCE NCERT SOLUTION CHAP SOUND

CBSE 9th Science NCERT Solution Chap Sound

Understanding the concept of sound is a fundamental part of the Class 9 Science curriculum under the CBSE board. The chapter "Sound" not only introduces students to the physical phenomena related to sound waves but also helps develop a scientific approach towards understanding everyday experiences involving sound. To aid students in mastering this chapter, detailed NCERT solutions are available that explain concepts clearly and concisely, ensuring a strong foundation for exams and practical applications.

In this article, we will delve into the core topics covered in the chapter "Sound," explore the key concepts, and understand how NCERT solutions can help clarify doubts and improve learning.

Introduction to Sound

Sound is a form of energy that produces a sensation of hearing. It is a mechanical wave that propagates through a medium such as air, water, or solids. The chapter begins by defining sound and discussing how it is produced and transmitted.

Key points:

- Sound is produced by vibrating objects.
- It requires a medium to travel; vacuum cannot support sound.
- The velocity of sound varies depending on the medium.

Production of Sound

Vibrations are the primary cause of sound production. When an object vibrates, it causes the particles of the surrounding medium to vibrate as well, creating sound waves.

Examples:

- Striking a bell causes it to vibrate and produce sound.
- Vocal cords vibrate when we speak or sing.

Understanding vibrations:

- Vibrations are back-and-forth or oscillatory movements.
- The frequency of vibrations determines the pitch of the sound.

Propagation of Sound

Sound waves are longitudinal waves, meaning the particles vibrate parallel to the direction of wave propagation.

Mediums of propagation:

- Solids
- Liquids
- Gases (air is the most common medium)

Speed of sound:

| Medium | Speed of Sound (approx.) |

|-----|-----|

| Steel (solid) | 5000 m/s |

| Water | 1480 m/s |

| Air | 340 m/s |

Note: The speed of sound increases with the stiffness and temperature of the medium.

Characteristics of Sound Waves

The chapter discusses several important characteristics:

- Frequency: Number of vibrations per second (Hz). Determines pitch.
- Wavelength: Distance between two consecutive compressions or rarefactions.
- Amplitude: Maximum displacement from the mean position. Determines loudness.
- Time period: Time taken for one complete vibration.
- Speed: How fast the wave propagates through the medium.

Relation between these:

$$[\text{Speed}] = [\text{Wavelength}] \times [\text{Frequency}]$$

Loudness and Pitch

- Loudness: Depends on the amplitude of the wave. Greater amplitude means louder sound.
- Pitch: Depends on the frequency. Higher frequency results in a higher pitch.

Echo and Reverberation

- Echo: Reflection of sound wave that is heard after the original sound.
- Reverberation: Multiple echoes that blend together due to repeated reflections, often causing disturbance in sound clarity.

Conditions for echo:

- The reflecting surface should be at least 17 meters away.
- The time delay between original sound and reflected sound should be at least 0.1 seconds.

Applications of Sound

- Sonar: Used by submarines to detect objects underwater.
- Ultrasound: Used in medical imaging (sonography).
- Communication: Speech and music.

Human Ear and Hearing

The human ear is a complex organ capable of detecting a wide range of frequencies.

Parts of the human ear:

- Outer ear (pinna)
- Ear canal
- Eardrum
- Ear ossicles (malleus, incus, stapes)
- Cochlea

The ear converts sound waves into electrical signals that are interpreted by the brain.

Disorders Related to Hearing

- Deafness: Partial or complete loss of hearing.
- Hearing aids: Devices to amplify sound.
- Prevention: Avoid exposure to loud noise, use ear protection.

The NCERT solutions serve as a comprehensive guide, simplifying complex concepts and providing clarity to students. As a critical chapter in the 9th-grade syllabus, mastering it is crucial for academic success and developing a scientific understanding of the world around us.

Introduction to Sound

Sound is a fascinating phenomenon that plays an integral role in our daily experiences. It is defined as a form of energy that travels through a medium in the form of vibrations. In this chapter, students explore the nature of sound, its production, propagation, and characteristics. The NCERT solutions provide detailed explanations and diagrams that help students grasp these fundamental ideas effectively.

What is Sound?

Sound is a series of vibrations that travel through a medium such as air, water, or solids and are detected by our ears. The chapter explains that sound cannot travel through a vacuum, emphasizing the necessity of a medium for sound transmission.

Production of Sound

The chapter discusses various sources of sound like musical instruments, human vocal cords, and vibrating objects. It explains how vibrations produce sound waves that propagate through the

medium.

Characteristics of Sound

Key features such as pitch, loudness, and quality are elaborated upon:

- Pitch: Depends on the frequency of vibrations.
- Loudness: Depends on the amplitude of vibrations.
- Quality: The distinctive sound of an instrument or voice.

QuestionAnswer What is the fundamental principle of sound as explained in CBSE Class 9 Science Chapter 10? The fundamental principle of sound is that it is a form of energy that propagates as longitudinal waves through a medium such as air, water, or solids due to vibrations of particles. How does the speed of sound vary in different mediums according to CBSE Class 9 NCERT solutions? The speed of sound increases in solids, decreases in liquids, and is slowest in gases. This variation is due to the differences in particle density and elasticity of the mediums. What is the importance of the ear in the human perception of sound as per CBSE Class 9 Science? The ear helps in detecting sound waves, converting them into electrical signals, and transmitting these signals to the brain, which interprets them as distinct sounds, enabling hearing. Explain the phenomenon of echo with reference to CBSE Class 9 Science Chapter 10. An echo occurs when sound waves reflect off a distant surface and return to the listener after a delay of at least 0.1 seconds, allowing the sound to be heard distinctly from the original. What are the applications of ultrasound in medical science as discussed in CBSE Class 9 NCERT solutions? Ultrasound is used in medical imaging to view internal organs, monitor pregnancy, and diagnose various health conditions without invasive procedures. How does the pitch and loudness of a sound relate to its frequency and amplitude, according to CBSE Class 9 Science? Pitch is directly related to the frequency of the sound; higher frequency results in a higher pitch. Loudness depends on the amplitude of the sound wave; larger amplitude produces a louder sound. What is the role of the medium in the transmission of sound as per CBSE Class 9 Science solutions? The medium provides the particles through which sound waves propagate. Without a medium, sound cannot travel, which is why sound cannot travel through a vacuum.
