Question What is a quick trick to multiply any number by 5? To multiply a number by 5, multiply it by 10 and then divide the result by 2. For example, $36 \times 5 = (36 \times 10) \div 2 = 360 \div 2 = 180$. How can I quickly find the square of numbers ending with 5? For numbers ending with 5, multiply the digit before 5 by its next consecutive number and then append 25. For example, 75^2 : $7 \times 8 = 56$, so $75^2 = 5625$. What is a shortcut to estimate the percentage of a number? To find, say, 20% of a number, divide the number by 5. For 20%, divide the number by 5; for 10%, divide by 10, and so on. How can I quickly determine if a number is divisible by 3? Sum all the digits of the number; if

the sum is divisible by 3, then the number itself is divisible by 3. Is there an easy way to find the cube of small numbers mentally? Yes, memorize cubes of numbers from 1 to 10. For larger numbers, use binomial expansion or approximate methods, but mental calculation of small cubes is straightforward with practice. What trick helps in quickly multiplying two numbers close to 100? Use the base 100. Subtract each number from 100, multiply those differences, and add the differences to 100 of one number. For example, 98×97 : $(100-2)$ and $(100-3)$. Multiply differences: $2 \times 3 = 6$. Add differences: $98 + 97 = 195$. The answer: $19500 + 6 = 18906$. How can I easily find the percentage increase or decrease between two numbers? Subtract the original number from the new number, divide by the original number, and multiply by 100 to get the percentage change. For example, from 50 to 60: $(60 - 50) / 50 \times 100 = 20\%$ increase. What is a quick way to check the last digit of a product without multiplying fully? Focus on the last digits of the numbers. Multiply only the last digits to find the last digit of the product. For example, 23×47 : last digits are 3 and 7; $3 \times 7 = 21$, so last digit is 1. How can I use approximation tricks to save time in aptitude tests? Round numbers to the nearest convenient value, perform the calculation mentally, and then adjust the result accordingly. This speeds up calculations while maintaining reasonable accuracy.

- Logical Reasoning Section

While not purely mathematical, reasoning questions often appear in conjunction with aptitude tests and include puzzles, pattern recognition, and logical deductions.

- Time Management and Question Distribution

Most tests are timed, typically lasting between 30 to 60 minutes, with a set number of questions?usually between 20 to 50. Questions are often divided evenly across sections or grouped

based on difficulty level.

Sample Questions and Solutions

Question 1: If the ratio of boys to girls in a class is 3:4 and there are 21 boys, what is the total number of students?

Solution:

Number of boys = 21

Ratio of boys to girls = 3:4

So, 3 parts = 21, 1 part = 7

Number of girls = 4 parts = $4 \times 7 = 28$

Total students = boys + girls = $21 + 28 = 49$

Question 2: A train travels 60 km at a speed of 30 km/h. How long does the journey take?

Solution:

Time = Distance / Speed = $60 / 30 = 2$ hours

Question 3: Find the next number in the sequence: 2, 4, 8, 16, ____

Solution:

Each term is multiplied by 2; thus, next term = $16 \times 2 = 32$

Final Tips for Acing the Sample Maths Aptitude Test

- Stay Calm and Confident: Anxiety can impair your problem-solving ability. Practice relaxation techniques.

- Read Questions Carefully: Avoid misinterpretation by thoroughly understanding what is asked.
- Skip and Return: Don't get stuck on difficult questions; move on and revisit later.
- Review Your Answers: If time permits, double-check calculations and answers.
