Practical Examples of Dragnet Solution in Numerical Reasoning

Example 1: Percentage Problem

Question:

A shop sold 120 units of a product at a profit of 20%. If the cost price per unit is Rs. 50, what was the total selling price?

Solution Using Dragnet Approach:

- Step 1: Understand data:
 - Cost price per unit = Rs. 50
 - Profit = 20%
 - Units sold = 120
- Step 2: Calculate selling price per unit:
 - Profit per unit = 20% of Rs. 50 = $0.20 \times 50 = \text{Rs. } 10$
 - Selling price per unit = Rs. 50 + Rs. 10 = Rs. 60
- Step 3: Calculate total selling price:
 - Total = Rs. 60 $\times$ 120 = Rs. 7200
- Final Answer: Rs. 7200

This example demonstrates the systematic breakdown?considering profit percentage, unit cost, and total units?to arrive at the solution efficiently.

Example 2: Data Interpretation

Question:

The following table shows the sales of five products over a month:

| Product | Units Sold | Price per Unit (Rs.) |

|-----|-----|-----|

| A | 150 | 20 |

| B | 200 | 15 |

| C | 100 | 25 |

| D | 180 | 22 |

| E | 120 | 18 |

Find the total revenue generated from all products.

Solution Using Dragnet Approach:

- Step 1: Calculate revenue for each product:

- Product A: $150 \times 20 = \text{Rs. } 3000$

- Product B: $200 \times 15 = \text{Rs. } 3000$

- Product C: $100 \times 25 = \text{Rs. } 2500$

- Product D: $180 \times 22 = \text{Rs. } 3960$

- Product E: $120 \times 18 = \text{Rs. } 2160$

- Step 2: Sum all revenues:

- $\text{Rs. } 3000 + \text{Rs. } 3000 + \text{Rs. } 2500 + \text{Rs. } 3960 + \text{Rs. } 2160 = \text{Rs. } 14620$

- Final Answer: Rs. 14620

By systematically calculating each component, the dragnet solution ensures accuracy and clarity.

- Verify your answer: Check if it makes sense within the context.

Step-by-Step Guide to Dragnet Solution Numerical Reasoning

Let's explore a detailed approach with an example to illustrate how to implement dragnet solutions effectively.

Example Problem:

In a company, the number of employees increased by 20% last year. If the current number of employees is 720, what was the number of employees two years ago?

Step 1: Understand the Question

You're asked to find the original number of employees two years ago, given the current number and the percentage increase over the last year.

Step 2: Identify Relevant Data

- Current employees = 720
- Percentage increase last year = 20%
- Time frame: Two years ago

Step 3: Break Down the Problem

- First, determine the number of employees after the 20% increase last year.
- Then, understand the growth over the two-year span.

Step 4: Reverse the Percentage Increase

Since the current number (720) reflects a 20% increase over the previous year, you can find the number of employees after the first year (i.e., at the end of last year):

Employees after 1 year = Current employees / (1 + percentage increase)

Expressed mathematically:

Employees after 1 year = $720 / 1.20 = 600$

Step 5: Understand Growth Over Two Years

The problem asks for the number of employees two years ago. Assuming the same percentage increase applies each year:

- Let the number of employees two years ago = x
- After one year: $x (1 + 20\%) = x 1.20$
- After two years: $x (1.20)^2$

We know after two years, the number of employees is 600 (from Step 4), so:

$$x (1.20)^2 = 600$$

Step 6: Solve for x

Calculate:

$$x = 600 / (1.20)^2$$

$$x = 600 / 1.44 \approx 416.67$$

Answer: Approximately 417 employees were there two years ago.

Sample Dragnet Solution Aptitude Test Questions and Solutions

Question 1: Quantitative - Number Series

Find the next number in the sequence: 2, 6, 12, 20, 30, ?

Solution:

Observe the differences:

$$6 - 2 = 4$$

$$12 - 6 = 6$$

$$20 - 12 = 8$$

$$30 - 20 = 10$$

The differences increase by 2 each time, so the next difference should be 12.

Next number = $30 + 12 = 42$

Answer: 42

Question 2: Logical Reasoning - Puzzle

Five friends A, B, C, D, and E are sitting in a row. A is to the immediate left of B. C is to the right of D but to the immediate left of E. Who is sitting in the middle?

Solution:

- A is to the immediate left of B ? A B
- C is to the right of D and immediately left of E ? D C E
- D is to the right of C, so sequence: D C E
- The arrangement considering A and B: A B, and D C E are separate, so the possible arrangement is:

A B _ D C E

- Since the only person left is C, and the sequence D C E is together, and A is to the immediate left of B, the most logical arrangement is:

A B D C E

- The person sitting in the middle is D

Answer: D

Question 3: Verbal - Synonyms

Choose the synonym of ?OBLIGED?:

- a) Forced

c) Allowed

d) Obligated

Solution:

The synonym of 'OBLIGED' is 'Forced' or 'Obligated,' depending on context. Both imply being required to do something.

Correct answer: a) Forced (or d) Obligated, but based on common usage, 'Forced' aligns better)

Question 4: Data Interpretation - Chart Analysis

(Description of a pie chart showing the percentage distribution of sales among four products)

Question: If the total sales are \$500,000, and Product A accounts for 25%, how much are the sales for Product A?

Solution:

Sales for Product A = 25% of \$500,000 = $(25/100) \times 500,000 = \$125,000$

Answer: \$125,000

What is Dragnet Verbal Reasoning?

Definition and Origin

Dragnet verbal reasoning is a specialized method or approach used in solving verbal reasoning questions by systematically "dragging" through the given data to extract relevant information efficiently. The term "dragnet" originates from a fishing technique where a net is cast to catch multiple fish simultaneously. Similarly, in verbal reasoning, the approach involves casting a mental "net" over the question and options to identify pertinent clues and eliminate distractors.

Key Characteristics

- **Systematic Approach:** It emphasizes a structured way of analyzing questions.
- **Time Efficiency:** Designed to save precious time during exams.
- **Accuracy Focused:** Helps in reducing errors by careful elimination.
- **Versatility:** Applicable across various types of verbal reasoning questions such as analogies, deductions, syllogisms, and comprehension.

Importance of Dragnet Verbal Reasoning in Competitive Exams

Enhances Comprehension Skills

By practicing dragnet techniques, candidates learn to quickly understand the core of complex passages or questions, which improves overall reading and comprehension abilities.

Improves Problem-Solving Speed

The systematic "dragging" process allows candidates to process questions faster, which is critical in timed examinations like SSC, CAT, GMAT, and other competitive tests.

Facilitates Better Elimination of Wrong Options

A key to success in multiple-choice questions is eliminating incorrect options efficiently. Dragnet reasoning trains candidates to identify and discard distractors quickly.

Builds Analytical Thinking

Applying this method encourages logical analysis, pattern recognition, and critical thinking, all of which are essential for high scores.

Core Strategies for Mastering Dragnet Verbal Reasoning
